

Just to confirm the offer logic:

If a customer buys multiple waffles with different prices, should the system always make the cheapest waffle free?

For example:

1. Customer buys:

- Nutella Waffle – ₹150
- Belgian Chocolate Waffle – ₹130

2. Result: Customer pays ₹150 and the ₹130 waffle is free.

3. Customer buys:

- ₹150 waffle
- ₹130 waffle
- ₹120 waffle

4. Result: Customer pays $₹150 + ₹130 = ₹280$ and the ₹120 waffle is free.

5. If a customer buys 4 waffles (₹150, ₹140, ₹130, ₹120), should the offer be applied as:

- Pay ₹150 + ₹140
- Get ₹130 + ₹120 free

Or should only one waffle be free per bill regardless of quantity?
